“The Spencer B. King III Catheterization Laboratory” in Nanjing, China

Nanjing First Hospital, Jiangsu Province, Nanjing, Republic of China – In November 16th at 12:00 pm the Catheterization Laboratory in Nanjing First Hospital will be named as **“The Spencer B. King III Catheterization Laboratory”** to highlight Dr. Spencer King’s stellar career as the founder of our subspecialty.

The Catheterization Laboratory in Nanjing First Hospital has been a center of excellence for over 25 years specializing in complex coronary interventions. We are among the leading facilities worldwide with average PCI volumes of over 3,500/annually involving mainly complex interventions in bifurcations and chronic total occlusion. A major contribution of this facility to the interventional community are the serial DK Crush randomized trials that have changed clinical practice by implementing the DK Crush technique in complex bifurcation lesions benefiting thousands of patients worldwide.

“The Spencer B. King III Catheterization Laboratory” will continue to operate as center of excellence for complex coronary interventions and will provide state-of-the-art training to the next generation of Interventional Cardiologists who will transmit the legacy of the founder of our subspecialty, Dr. Spencer B. King III to the next generations.
